HEIDTS® Has a New Home!

Heidts Automotive Group has moved to their new home in Lake Zurich, Illinois. The new building is over three times the size of the previous location and allows Heidts to increase efficiency, design and build new products more quickly and increase inventory for even faster product delivery.

The new building features the incorporation of our new shock line that completes the circle of performance suspension parts available from Heidts," stated Heidts Performance Group CEO Wallace Leyshon. "Key to the move is increasing the size of our R & D environment to help develop and deliver products for an ever widening breadth of product coverage by our Group companies."

HEIDTS® MUSCLE CAR PARTS

'67-'69, '70-'73 CAMARO/FIREBIRD

HEIDTS PRO-G® IRS

Now with Silver Powder Coated Springs! Powder coating does not rust or peel while saving you money!

HIGH HORSEPOWER INDEPENDENT REAR SUSPENSION 58 1/2" TRACK WIDTH

Product is painted for catalog purposes only! All kits ship with Silver Powder Coated Springs - not shown.

Available with cast aluminum center section or steel fabricated housing.

U.S. Patent No. D666,949 Additional Patents Pending

COMPLETE BASE KIT STARTING AT \$9,320

WHY HEIDTS PRO-G® IRS

Do you really want to go fast and out-handle everyone else on the autocross or road race course in your first generation camaro? Full independent rear suspension is the only way to go. **HEIDTS®** now has a High Horsepower Independent Rear Suspension bolt-In Package that will do the job just fine.

It is a true high horsepower package, with upper links and heavy duty CV joints. The upper link produces $-.5^\circ$ of camber curve at 3/4 of total travel, especially during very high cornering loads. Forward struts, attached to the sub-frame connectors insures the wheels stay in place during hard acceleration.

“About once every ten years, someone comes up with a breakthrough part in the aftermarket. The HEIDTS® Bolt-in Independent Rear suspension could be that part for 2011 and beyond”

Quoted from Jim Campisano – Editor
Super Chevy Magazine, January Issue

WHAT YOU GET:

- Track Width 58 1/2"
- 9" Aluminum HSG.
- 3rd Member, Iron, Posi
- CV Joint Halfshafts

HEIDTS[®] MUSCLE CAR PARTS

'82-'92 CAMARO/FIREBIRD

BOLT-ON SUBFRAME CONNECTOR

No cutting or welding to install allowing you to retain your stock exhaust, fuel and brake lines. These connectors come complete with grade 8 hardware and instructions. They are powder coated black to insure long life and beauty. (they can also be welded)

Description	Part#	Price
82-92 Camaro/FireBird	102411	261.00

BOLT-ON REAR CONTROL ARMS

Genuine Energy Suspension bushings are used exclusively for a long life with low maintenance. Profile milled sway bar mounts. Powder coated gloss black for a long lasting beautiful finish.

Description	Part#	Price
82-92 Camaro/FireBird, F-Body	401010	195.00

GM BOLT ON TORQUE ARM

Our BOLT ON TORQUE ARM features an 1/8" steel plate cradle that replaces the factory rubber mount. Our Torque Arm not only improves traction but significantly increases stability under deceleration. Our adjustable Torque Arm enables you to adjust the pinion angle. *These only fit OEM rear end housings.

Description	Part#	Price
(Adjustable) 82-92 Camaro/FireBird	402013	472.00
(Adjustable) 93-02 Camaro/FireBird	402015	472.00

CB-130

HIGH PERFORMANCE TALL 2" DROPPED STEEL SPINDLE

It is called a TALL Spindle because the upper ball joint is raised 1-1/2". Different from the factory design, it yields a better camber change during suspension movement. Pivot points are determined by the ball joints on the spindles and bushing locations on the frame, not the control arms. These spindles are STEEL, the strongest ones in the industry.

Description	Part#	Price
2" Dropped Spindles, Pair	SP-110	341.00

For 67-69 Camaro/Firebird & 68-74 Nova only!

'64-'72 CHEVELLE & GM A-BODY PRE '73

GM A-BODY CONTROL ARMS

Replace your tired control arms with **HEIDTS®** tubular upper and lower control arms for the '64-'72 Chevelle, GTO and all other GM A-body cars. These arms are state of the art in both design and fabrication. Uppers are 1-1/4" dia. tube, and the lowers are a full 1-1/2" tube. They all come powder coated and are supplied with ball joints and bushings installed. High performance urethane bushings are standard to tighten up the suspension and allow no deflection under cornering loads for absolutely solid, positive handling. Upper arms include offset cross shafts for ease of alignment and allow you to experiment with caster settings, allowing better straight line tracking as well as in the corners. All arms are completely assembled.

CHEVELLE & GM A-BODY COIL OVER SHOCKS

Coil-Over Shocks make the suspension more tunable, and **HEIDTS®** has them. Billet shock bodies with powder coated springs in different spring rates are the ticket. These shocks are fully adjustable with just the turn of a knob in both compression and rebound for full performance tuning. Ride height is also tunable with adjustment rings. Springs included.

REAR 4-LINK PACKAGES

At HEIDTS® the answer to handling is their upper and lower rear Suspension Links for the '64-'72 Chevelle, GTO and all other GM A-body cars. These links are state of the art in both design and fabrication. Upper Links are adjustable, 1-1/4" dia. tube, and the lowers area full 1-1/2" x 2" square tube. They come powder coated black and are supplied with greaseable swivel and fixed bushings installed. High performance urethane bushings are used to tighten up the suspension and swivel ends allow roll deflection under cornering loads for absolutely solid, positive handling. All rear links are completely assembled, ready to install and include new hardware.

Description	Part#	Price

HEIDTS PRO-G[®] IRS

Now with Silver Powder Coated Springs! Powder coating does not rust or peel while saving you money!

HIGH HORSEPOWER INDEPENDENT REAR SUSPENSION

U.S. Patent No. D666,949
Additional Patents Pending

WHY HEIDTS PRO-G[®] IRS

Do you really want to go fast and out-handle everyone else on the autocross or road race course in your Mustang? Full independent rear suspension is the only way to go. HEIDTS[®] now has a High Horsepower Independent Rear Suspension bolt-In Package that will do the job just fine.

Available with cast aluminum center section or steel fabricated housing.

Product is painted for catalog purposes only! All kits ship with Silver Powder Coated Springs - not shown.

It is a true high horsepower package, with upper links and heavy duty CV joints. The upper link produces -5° of camber curve at 3/4 of total travel during very high cornering loads. Forward struts, attached to the sub-frame connectors insures the wheels stay in place during hard acceleration.

"About once every ten years, someone comes up with a breakthrough part in the aftermarket. The HEIDTS[®] Bolt-in Independent Rear suspension could be that part for 2011 and beyond!"

Quoted from Jim Campisano - Editor Super Chevy Magazine, January Issue

Order/Tech: 800-841-8188

HEIDTS[®] MUSCLE CAR PARTS

2005-2014 MUSTANG

Advanced Geometry Suspension System 4.0

AGS 4.0 "SUPER-GRIP" FRONT LOWER CONTROL ARM MODULE

Description	Part#	Price
2005 -2009 Mustang and GT500. Patent Pending.	KB-49721	787.00
2010-2014 Mustang and GT500 Patent Pending.	KB-49731	787.00

The Kenny Brown AGS 4.0 "Super Grip" Front Lower Control Arm Module completely transforms the handling and driving dynamics of your S197 Mustang or Shelby GT500. A critical element to the AGS 4.0 Front Suspension System is the computer designed "Super Grip" Front Lower Control Arms. They give you precision and performance in an easy-to-install, street friendly package.

AGS 4.0 LIGHT-WEIGHT TUBULAR FRONT K-MEMBER

Description	Part#	Price
2005-2014 Mustang and GT500	KB-49710	808.00

Strongest, Best Engineered, Bolt-In K-Member Available.

- Designed to work with our exclusive Super-Grip AGS 4.0 control arms
- Reduces front weight for better vehicle balance
- Rugged Tubular Design

ADJUSTABLE REAR CONTROL ARMS

Description	Part#	Price
Street/Sport (Single adjustable Rod-End and urethane)	KB-28661	272.00
Track/Sport (Double adjustable Rod-Ends)	KB-28660	314.00

A Kenny Brown exclusive - offsets spacers straighten control arms bringing them parallel to center line, correcting rear roll axis.

- Fits 2005-2014 Mustang and GT500
- Improves grip, handling, and control
- Less deflection and more grip
- Light-weight, heavy-duty design
- Low-friction bushings and competition-grade rod ends

NOTE: We recommend you pair the Adjustable Rear Lower Control Arms with the AGS 4.0 Anti-Squat Traction Brackets (KB-28601) to maximize performance, grip and braking.

ANTI-SQUAT TRACTION BRACKETS

Description	Part#	Price
2005-2014 Mustang and GT500	KB-28601	142.00

Another critical element in the Kenny Brown AGS Suspension System, the Anti-Squat Traction Brackets let you put the power to the ground with more control, traction, grip and braking for serious high-performance driving. For maximum performance Kenny Brown recommends adding Adjustable Rear Lower Control Arms (KB-28661 or KB-28660) and AGS 4.0 Upper Control Arm Module (KB-28665).

AGS 4.0 - The Best Complete Late-Model Suspension Solution

ROLL CENTER RELOCATION KIT WITH HEAVY-DUTY DOUBLE ADJUSTABLE PANHARD BAR

Description	Part#	Price
2005-2014 Mustang and GT500	KB-28620	523.00

A lower rear roll center has been part of Kenny's AGS suspension systems since the early '90's and further refined for the new 2005-2014 Mustangs and GT500's.

- Dramatically improves handling
- Adjustable mounting brackets for lower ride height
- Double-Adjustable Panhard Bar with competition-grade rod ends
- MUST HAVE for street performance

HEAVY DUTY REAR ADJUSTABLE PANHARD BAR - STREET SPORT

Description	Part#	Price
2005-2013 Mustang and GT500 Street/Sport – adjustable with urethane/rod end	KB-28630	209.99
2005-2013 Mustang and GT500 GT4 Track/Sport – double adjustable with double rod ends	KB-28631	188.00

Keep Your Axle Centered for Improved Handling.

- Designed to replace the OEM panhard bar
- Heavy Duty Design
- Low-friction bushings and competition-grade rod-ends
- Track/Sport is double adjustable with two HD rod-ends

Lowering Mustangs with the "fixed length" factory Panhard Bar tends to shift the axle to one side.

U-LINK REAR UPPER CONTROL ARM MODULE - STREET/COMP

Description	Part#	Price
2005-2009 Mustang and GT500	KB-28665	419.00
2010-2014 Mustang and GT500	KB-28675	419.00

- Improves critical aspects of the rear suspension geometry
- Improves anti-squat/ anti-lift
- Lightweight, heavy-duty design for increased strength
- Critical part of the AGS 4.0 Suspension System
- A "MUST-HAVE" for all lowered Mustangs and street performance driving

The U-Link upper control arm module is a critical part of this AGS 4.0 rear suspension package. Kenny Brown lengthened the upper control arm to reduce SVSA (side-view swing arm) instant center migration for more stable and predictable handling, grip and braking.

The Ultimate in Under Car Chassis Support

KB-29550

KB-29004

KB-28010

KB-28019

EXTREME MATRIX KIT

Description	Part#	Price
1994-2004 Mustang GT, V6 & Cobra* (kit includes KB-29004, KB-28010, KB-28019)	KB-29550	472.00
1979-1993 Fox Mustang GT, V6 & Cobra (kit includes KB-29004, KB-28009, KB-28019)	KB-29551	472.00
2005-2014 Mustang, GT500 (kit includes KB-28009, KB-28029 – note: does not include 29004)	KB-29552**	272.00

* 96-98 Cobra - Subframe Connectors must be modified by shortening slightly.
 **2005-2014 Mustangs, GT500 do not need subs to install Extreme Matrix Brace.

The Kenny Brown Extreme Matrix Kit improves the ride quality and handling of your Mustang by maximizing the strength of the car's center pan section, with minimum additional weight and no loss in ground clearance. The Extreme brace "bridges" the Subframe Connectors** and Jacking Rails to form a triangulated 12" wide frame on each side of your Mustang. Finished in OE-quality, silver zinc chromate for rust protection.

DOUBLE-CROSS SUBFRAME CONNECTORS

Description	Part#	Price
1979-2004 Mustang GT, V6 and Cobras*	KB-29004	134.00

* 96-98 Cobra - Subframe Connectors must modify by shortening slightly.

The Kenny Brown industry leading Double-Cross Subframe Connectors dramatically reduce power-robbing chassis flex by uniting the front and rear subframes. The double-cross design reduces the twisting action of the floor pan by cutting the free span of the car in half by attaching the cross section of the Subframe Connectors to the Mustang's mid-pan. Improves handling, feel, and weight transfer; strengthens the unibody and extends the life of your Mustang. Finished in OE-quality, silver zinc chromate for rust protection.

JACKING RAILS

Description	Part#	Price
2005-2014 Mustang, GT500*; 1979-1993 Mustang GT, V6 and Cobra	KB-28009	83.00
1994-2004 Mustang GT, V6 and Cobra	KB-28010	83.00

* Requires modification.

Kenny Brown Jacking Rails lets you safely and quickly jack up your Mustang any place along the rocker panel under the doors. Prevents deformation of the front subframe rails and floor pan commonly experienced with jack use. Adds additional rigidity and structural integrity to the chassis. A must for all lowered Mustangs. It's quick, easy, and simple to install. Finished in OE-quality, silver zinc chromate for rust protection.

EXTREME MATRIX BRACE

Description	Part#	Price
1979-2004 Mustangs and Cobras	KB-28019	250.00
2005-2014 Mustangs, GT500	KB-28029**	250.00

Note: The Extreme Matrix Brace cannot be installed independently. Needs Kenny Brown Super Subs and Jacking Rails for proper attachment.

**2005-2014 Mustangs, GT500 do not need subs to install Extreme Matrix Brace. Will not fit convertibles.

The Kenny Brown Extreme Matrix Brace improves the ride quality and handling of your Mustang by maximizing the strength of the car's center pan section, with minimum additional weight and no loss in ground clearance. The brace works in conjunction with the the Subframe Connectors** and Jacking Rails to form a triangulated 12" wide frame on each side of your Mustang! Finished in OE-quality, silver zinc chromate for rust protection.

Number One in Mustang Chassis Support

3-PT HEAVY-DUTY STRUT TOWER BRACE

Description	Part#	Price
1999-2004 Mustang GT / '99-'01 Cobra / '99-'04 V-6	KB-29302	199.00
2003-2004 Mach 1 Mustang	KB-29403	294.00
2003-2004 Cobra	KB-29501	209.00

The Kenny Brown 3-pt Heavy-Duty Strut Tower Brace increases the strength and rigidity of the upper portion of the engine bay and front suspension by reinforcing the strut towers to the firewall giving ride quality and handling a huge boost. This extra rigidity manages chassis loads from engine torque for better handling and performance under hard cornering, sudden starts, sudden stops and abrupt directional changes.

2-PT HEAVY-DUTY STRUT TOWER BRACE

Description	Part#	Price
Fits 2005 -2014 Mustang GT & V-6	KB-29601	115.00

Note: Will not fit GT500 w/supercharger

The Kenny Brown 2-Point Heavy-Duty Strut Tower Brace substantially increases the strength and rigidity of the engine bay and front suspension by reinforcing the shock towers, giving ride-quality and handling a huge boost. The heavy-duty design allows the front suspension to better manage the stress loads generated from hard cornering, while also allowing the chassis to better manage the loads from twisting under hard launch.

2-PT LOWER CHASSIS BRACE

Description	Part#	Price
2005 -2014 Mustang and Shelby GT500	KB-29405	104.00

The Kenny Brown 2-Point Lower Chassis Brace substantially increases the strength and rigidity of the frame and K-member mounting points. The brace allows the chassis to better manage the loads generated from hard cornering and from twisting under hard launch. A much needed addition for road racing applications where alignment accuracy and consistency are critical to optimal performance.

REAR SHOCK TOWER BRACE

Description	Part#	Price
1994-2004 Mustang GT, V6 and Cobra	KB-29901	157.00
2005-2014 Mustang, Shelby GT500	KB-29902	157.00

Note: May fit 1979-1993 Mustang w some adjustments.

The Kenny Brown Heavy-Duty Rear Shock Tower Brace adds rigidity and strength to the rear shock tower through triangulated reinforcement of the shock tower, capturing torsional loads directly over the rear axle for improved handling weight transfer and grip. Improve handling and performance under hard cornering and abrupt directional changes.

Kenny Brown AGS 3.0 Front Suspension 1979-2004 Mustang/Cobra

KB-29615

LIGHT-WEIGHT TUBULAR FRONT K-MEMBER

Description	Part#	Price
1996-2004 Mustang and Cobra* 4.6L engines	KB-49610	953.00
1994-2004 Mustang and Cobra** 5.0L OHV engines.	KB-49615	953.00

- * `99-`04 4.6L Cobras need oil filter relocation kit
- ** Requires coil-over strut/spring package
- ** May require modifications for proper fitment on `79-`93 models

The Kenny Brown Advanced Geometry Tubular K-Member optimizes our "fixed strut" advanced geometry suspension design for superior handling, grip, and braking with a distinct European sports car performance feel. The Tubular K-member reduces overall weight by 40 pounds over factory and improves weight distribution and balance by extending the wheelbase forward by one inch improving the roll center envelope, camber gain, toe curve greatly improving the handling performance. Designed to be used in conjunction with the Kenny Brown Tubular Front Lower Control Arms and coil-over shock package.

KB-49621

TUBULAR FRONT LOWER CONTROL ARMS WITH LOW-FRICTION BALL JOINTS

Description	Part#	Price
1979-2004 Mustang and SVT Cobra	KB-49621	556.00

- * Requires coil-over strut/spring package
- * May require minor modifications for proper fitment on some older models

The Kenny Brown Advanced Geometry Tubular Front Lower Control Arms offers a significant reduction in weight with increased rigidity for improved suspension response. The Control Arms are a direct OEM replacement and allow for coil-over front struts on 1979-2004 Mustangs and Cobras. Choice of ball joints. Competition ball joints allow fine tuning adjustments in roll-center height.

KB-490042

CASTER PLUS UPPER STRUT MOUNT KIT

Description	Part#	Price
1994-2004 Mustangs and Cobra	KB-49041	157.00
1987-1993 Mustang and Cobra	KB-49042	157.00

The Kenny Brown Caster Plus Upper Strut Mount Kit keeps your car pointed in the right direction whether you're blasting down the straights, turning hard into the apex, powering out of the corner exit or heading home from work - without the noise, hassle or high cost of other common strut mounts kits. Our design relocates the upper strut mounting point for maximum caster while providing the full range of camber adjustment enhancing the front camber curve and totally changing the dynamics of the front suspension. Dramatically improving cornering ability, high-speed and directional stability, while providing sharp cornering ability by maximizing the "foot print" of the tire under all demands.

KB-80503

ADJUSTABLE HEAVY-DUTY FRONT SWAY BAR

Description	Part#	Price
1994-2004 Mustang and Cobra	KB-80503	403.00
Sway Bar Endlinks fits 1994-2004 Mustang and Cobra Endlinks specific to Kenny Brown front control arms or stock control arms	KB-80603	73.00

Note: Requires Sway Bar Endlink Kit, KB-80603

The medium-firm Front Sway Bar that Kenny Brown uses on all of his street and track cars dramatically improves the handling of your Mustang. The Front Sway Bar reduces body roll and increases front grip. Exceptional for track applications.

Advanced Geometry Suspension 3.0 Cobra IRS/ Mustang Live Axle

IRS REAR UPPER CONTROL ARMS

Description	Part#	Price
1999-2004 Cobra	KB-49530	892.00

The Kenny Brown IRS Rear Upper Control Arms offers improved suspension response and "bite" through a significant reduction in weight and increased strength. Features urethane bushings at the chassis end.

KB-49530

IRS REAR LOWER CONTROL ARMS

Description	Part#	Price
Fits 1999-2004 Cobra	HKB-49520*	682.00

*Must convert to coil-over shocks

The Kenny Brown IRS Rear Lower Control Arms put the power to the ground with more control through improved suspension response. Features urethane bushings. Significant weight reduction and increased strength.

KB-49520*

IRS FORWARD TORQUE BRACE

Description	Part#	Price
Fits 1999-2004 Cobra	KB-29600	157.00

The Kenny Brown IRS Forward Torque Brace helps reduce wheel hop experienced in IRS cars by controlling the torque-induced reflex deflection on the IRS carrier at the driveshaft, improving traction and overall handling of your Cobra.

KB-29600

IRS ALUMINUM DIFFERENTIAL BUSHING KIT

Description	Part#	Price
1999-2004 Cobra	KB-87011	94.00
Urethane O.E. Replacement Bushings	KB-87001	57.00

Helps reduce wheel hop, adjusts pinion angle.

KB-87011

IRS REAR STEER KIT FOR 1999-2004 SVT COBRA

Description	Part#	Price
1999-2004 Cobra	KB-49550	209.00

The Kenny Brown IRS Rear Steer Kit is designed to dramatically reduce the amount of "rear steer" induced by rear body roll under hard cornering. Adds stability and improves handling and grip.

KB-49550

ADJUSTABLE REAR UPPER CONTROL ARMS

Description	Part#	Price
1979-2004 Mustang, 1993-1998 Cobra	KB-28050	313.00

HEIDTS PRO-G® '62-'67 BOLT-ON SUBFRAME

Now with Silver Powder Coated Springs! Powder coating does not rust or peel while saving you money!

HEIDTS PRO-G®
2" Dropped Spindle

Part of this high performance suspension package. Make your Nova handle like a 600 HP Go-Kart!

HEIDTS PRO-G®
Suspension

True High Performance purpose designed suspension. A true race car designed geometry, not a warmed-over street rod suspension.

Product is painted for catalog purposes only! All kits ship with Silver Powder Coated Springs - not shown.

Bolt on the best suspension possible for your '62-'67 Nova. **HEIDTS®** now offers their true bolt on Pro Touring full front subframe. Featuring their new **HEIDTS Pro-G®** Suspension package for unbelievable cornering and overall handling. Simply unbolt and remove your front sheetmetal, engine and trans, your old subframe, then slide in the new complete **HEIDTS®** Subframe. Reinstall your fresh engine, reinstall your sheetmetal and you are set to tear up the streets!

HEIDTS PRO-G IRS

Now with Silver Powder Coated Springs! Powder coating does not rust or peel while saving you money!

HIGH HORSEPOWER INDEPENDENT REAR SUSPENSION

WHY HEIDTS PRO-G® IRS

Do you really want to go fast and out-handle everyone else on the autocross or road race course in your Nova? Full independent rear suspension is the only way to go. HEIDTS® now has a High Horsepower Independent Rear Suspension bolt-In Package that will do the job just fine.

U.S. Patent No. D666,949
Additional Patents Pending

Available with cast aluminum center section or steel fabricated housing.
Product is painted for catalog purposes only! All kits ship with Silver Powder Coated Springs - not shown.

COMPLETE BASE KIT STARTING AT \$9,320

It is a true high horsepower package, with upper links and heavy duty CV joints. The upper link produces $-.5^\circ$ of camber curve at 3/4 of total travel, during very high cornering loads. Forward struts, attached to the sub-frame connectors insures the wheels stay in place during hard acceleration.

*Subframe Connectors Included.

WHAT YOU GET:

- Track Width 56 1/2"
- 9" Aluminum HSG.
- 3rd Member, Iron, Posi
- CV Joint Halfshafts
- Tubular Upper & Lower Arms
- Steel Outer Uprights
- Top Crossmember
- Frame Mounting Brackets
- Front Pinion Support
- Forward Struts*
- 10.5" Wilwood Rotors
- Black Wilwood Calipers
- Billet Single Adjustable Coil-Overs with Silver Powder Coated Springs
- Posi-Traction

OPTIONS: CALL FOR DETAILS.

- Choice of Gear Ratios
- Parking Brake Kit and Cable Kit

"About once every ten years, someone comes up with a breakthrough part in the aftermarket. The HEIDTS® Bolt-in Independent Rear suspension could be that part for 2011 and beyond"

Quoted from Jim Campisano - Editor Super Chevy Magazine, January Issue

Control Arms can be shipped unassembled for powdercoat painting.

BUSHING & BALL JOINT CAPS

Upper & Lower Control Arm Bushing Caps. Fully polished aluminum, with polished stainless bolts, will fit Tubular Control Arms or stock control arms.

The finishing touch to your suspension. Cover those upper ball joints with our Ball Joint Caps. They are polished stainless steel, including polished screws.

Description	Part#	Price
Stainless Steel Ball Joint Caps (1 Pair)	CA-210	81.00
Polished Aluminum Bushing Caps (Complete Set)	CA-211	195.00

Note: CA-211 is a set of 8 caps!

COIL-OVERS & 1" DROPPED COIL SPRINGS

HEIDTS® Billet aluminum coil-over shocks are fully adjustable for ride height and dampening. Specifically designed full length conical springs are powder coated bright silver. Two progressive spring rates for big blocks or small blocks. Fits coil-over arms or stock applications.

To give your 'Shoobox' an even lower look, add these HEIDTS® 1" Dropped Coil Springs. They are 1" shorter than New factory springs. Combined with our 2" Dropped Spindles, they will put your cruiser a full 3" in the weeds safely and easily.

Description	Part#	Price
55-57 Chevy Coil-Over Shocks	CB-120	400.00
450# 11" Silver Powder Coat Coil-Over Springs - Small Block	CQ-450-11	162.00
550# 11" Silver Powder Coat Coil-Over Springs - Big Block	CQ-550-11	162.00
1" Dropped Coil Springs (Factory Style) - Small Block	CS-060	107.00
Thrust Bearings For Coil-Over Shocks	CQ-010	40.00
Spanner Wrench	TA-001	18.00

STABILIZER BAR KITS

Stabilizer bars, or sway bars, are used to control body roll and sway. HEIDTS® Stabilizer Bars for '55-'57 Chevys are made of heat treated steel. They are available in either 7/8" or 1" bar, with urethane bushings.

Description	Part#	Price
7/8" Front Swaybar With Urethane Bushings	SB-050-U	200.00
1" Front Swaybar With Urethane Bushings	SB-051-U	200.00
7/8" Rear Swaybar With Urethane Bushings	SB-052	195.00

'55-'57 CHEVY

HEIDTS® front suspension components are perfect for lowering, stopping and just flat out making your Tri-Five handle. With our components you will get the look, the stopping power and the handling you deserve.

HEIDTS 2" DROPPED STEEL SPINDLE

Our 2" Dropped Spindles are full steel spindles, just like factory spindles. This is much stronger than cast iron. They use your stock steering arms, with no loss of turning radius. No realignment required. The caliper brackets bolt on like mid-70's Chevys, allowing many brake options shown.

Description	Part#	Price
2" Dropped Spindles - Late GM Brackets	SP-102	388.00
2" Dropped Spindles (69-72 Calipers) - Early GM Brackets	SP-102-B	399.00
2" Dropped Spindles - Use with Wilwood Brake Kits (Pair)	SP-002-A	184.00

* Moves wheel out 5/16" from stock loc

DISC BRAKE KITS

All the components needed to complete your 2" Dropped Spindle installation for either Late GM or Early GM calipers. Includes rotors, Calipers with Pads, Bearings and Seals, Spindle Nuts, Dust Caps, Hoses and Banjo Bolts. The "Conversion Kit" updates early stock spindle disc brake kits to our 2" spindles. Spindles not included.

Description	Part#	Price
10.5" Rotors, B-Body Single Piston Calipers for HEIDTS® Spindle	DF-203	341.00
10.5" Rotors, A-Body Single Piston Calipers for HEIDTS® Spindle	DF-203-B	341.00

'55-'57 CHEVY TRIANGULAR 4-LINK

HEIDTS® '55-'57 Chevy Triangulated 4-Link Kit is a very popular kit as it does not require a Panhard Rod. Bars are fully adjustable, 1-1/4" X .156 tube with 3/4" stainless adjusters and urethane bushings, angled and straight chassis brackets, tabs and hardware.

These kits are available in plain steel or polished stainless steel tubes.
NOTE: Intended for stock or aftermarket frames.

INCLUDED IN BASE KIT:

- 4-Link Chassis and Axle Brackets
- Top Crossmember
- Standard Black Coil-Over Shocks and Black Springs

Now with Silver Powder Coated Springs! Powder coating does not rust or peel while saving you money!

HEIDTS PRO-G IRS

BOLT-IN INDEPENDENT REAR SUSPENSION

Patent Pending

**COMPLETE BASE KIT
STARTING AT \$9,320**

Product is painted for catalog purposes only! All kits ship with Silver Powder Coated Springs - not shown.

The Tri-Five **HEIDTS Pro-G**® IRS is a true bolt-in, high horsepower Independent Rear Suspension System for 1955 through 1957 Chevy cars. This industry-leading design is based off the proven and award-winning **HEIDTS Pro-G**® IRS geometry, while the bolt-in design means it can be installed on cars that are already complete or easily added to builds already underway. The Tri-Five **HEIDTS Pro-G**® IRS also features several design enhancements to make exhaust routing easier.

INCLUDED IN BASE KIT:

- Top Crossmembers • Upper & Lower Arms
- Aluminum Uprights • CV Joint Halfshafts
- 9" Aluminum Housing • 3rd Member, Iron, Posi
- 10.5" Wilwood Rotors with 4 Piston Polished Calipers
- Billet Single Adjustable Coil-Over Shocks with Silver Powder Coated Springs

Now with Silver Powder Coated Springs! Powder coating does not rust or peel while saving you money!

Also available in fully polished version as shown. Call for details.

HEIDTS PRO-G[®] IRS

UNIVERSAL HIGH HORSEPOWER INDEPENDENT REAR SUSPENSION

WHY HEIDTS PRO-G[®] IRS

HEIDTS[®] now has a High Horsepower Independent Rear Suspension bolt-In Package for almost any car. For those of you who want ultra modern handling in your classic car can now have it with this fully independent suspension. This full independent rear suspension is the only way to go.

It is a true high horsepower package, with upper links and heavy duty CV joints. The upper link produces $-.5^{\circ}$ of camber curve at 3/4 of total travel, especially during very high cornering loads. Forward struts, attached to the sub-frame connectors insures the wheels stay in place during hard acceleration.

HEIDTS® STREET ROD PARTS

**OUR KITS ARE PRE-FITTED, READY TO INSTALL!
NO MISTAKES, EVERYTHING'S PRE-CUT.**

**MUSTANG II
CROSSMEMBERS**

- One-Piece Shock Cups are T.I.G welded in place. First class, for your car.
- Built-in Anti-Dive is all fitted to your frame... No Grinding Required! Nothing to measure or trim...It's All Done!
- Vertical Inner Uprights. This is the strongest design available, with twice the weld area. This will keep your frame from twisting!
- Main Crossmember made from only 2 Formed Pieces for maximum strength and Accurate Fit. This is VERY important!
- Crossmember and Spring Towers precut and pre-welded to fit your frame... Nothing to Measure!

UNIVERSAL MUSTANG II CROSSMEMBERS

UNIVERSAL MUSTANG II CROSSMEMBERS FOR 56 1/2" OR 60" TRACK WIDTH VEHICLES

This kit fits larger vehicles that have a 60" track width. It is intended for use with our 4" Rack Extension Kit to keep the geometry straight.

56 1/2" track width crossmembers fit frame rail from 24" to 30"
60" track width crossmembers fit frame rail from 27 1/2" to 33 1/2"
(Outside to outside frame dimensions)

Description	Part#	Price
56-1/2" Track Width Crossmember	KX-101-E	430.00
60" Track Width Crossmember *Rack Extension Kit Required	KX-102-E	430.00
56-1/2" Track Width Crossmember for Full A-Frame Lower	KX-101-E-K	485.00
60" Track Width Crossmember for Full A-Frame Lower	KX-102-E-K	485.00

MUSTANG II CROSSMEMBERS

These crossmembers are individually designed for the '64 1/2 to '70 Mustang, '67 to '70 Cougar and '60 to '65 Falcon. They include full front section boxing plates that weld into place. The correct geometry and anti-dive is all designed in for superior handling and ease of operation. **HEIDTS® 2"** Dropped Spindle recommended to retain stock ride height.

Description	Part#	Price
64 1/2 - 70 Mustang / 67 - 70 Cougar	PX-320-E-K	539.00
60 - 65 Falcon	PX-330-E-K	539.00

SUBFRAME / CROSSMEMBER ASSEMBLY - ONLY

Description	Part#	Price
Subframe/Crossmember Assembly	CX-320-S	755.00
Crossmember Only	CX-320-E	430.00

THE FORD GEOMETRY IS ALREADY BUILT IN. NOTHING TO CUT, JUST WELD IN PLACE!

FORD IFS

Our Mustang IFS kits for Fords are natural conversions for the Ford frames. We retain all the factory dimensions and locations, so you get all the benefit of Ford engineering in your front end. There's absolutely no reason to widen or otherwise modify the Ford design or use long tie rod ends!

These kits fit the frames easily and yield a 3"-4" suspension drop.

Included in most kits are all the special, hard-to-make brackets and mounts you will need to complete the installation, plus HEIDTS® own illustrated installation booklet.

We don't make a Mustang conversion kit for the Model A or '32 Ford. See our Superide IFS kits for these cars. These cars, because of their direct mounting low fenders, require modifying the Ford IFS design by relocating the upper control arm inner pivot to clear the fender, causing a very noticeable amount of bumpsteer! Turn to the Tech info on page 75 for more detailed information on this subject.

UNIVERSAL MUSTANG II CROSSMEMBERS

Put a HEIDTS® Mustang II crossmember in your car! Using our Multi-fit Mustang II Crossmember Kit you can now adapt the very popular Mustang II suspension with HEIDTS® correct geometry into almost any application. The crossmember and spring towers are made oversized to allow trimming and fitting to your particular frame size. Templates and instructions, designed for a home builder to install, walk you through the entire installation to insure that you get correct anti-dive and geometry.

CHEVY IFS

The Chevy models shown here also have frames and fenders which lend themselves nicely to Mustang front end conversion, without changing the critical geometry. Chevy IFS kits also come complete with the hard-to-make special brackets, such as radiator perch on certain models, to quickly and easily complete the installation. And naturally, like our Ford kits, Chevy kits do not bumpsteer at all. See our Tech info on page 75 of this catalog for a more detailed explanation of the hazards of bumpsteer

OUR IFS KITS RETAIN ALL THE ORIGINAL SUSPENSION FEATURES!

- Longer tie rod ends aren't used – ever!
- Mounting points of all control arms match the original ford design.
- Factory anti-dive built right in.

Chevy kits also come with a step-by-step, fully-illustrated instruction booklet to ensure that your installation goes as easily as it should!

INSTALLATION BOOKLET

Included in most kits are all the special, hard-to-make brackets and mounts you will need to complete the installation, and all have a step-by-step illustrated installation booklet.

Correct design results in correct camber action – and no bumpsteer

HEIDTS® STREET ROD PARTS

HEIDTS® MUSTANG II

Upper A-Arms (Pair)

CA-101-SS

TUBULAR UPPER A-ARMS

Tubular Upper A-Arms are the ultimate in looks. Direct replacement for stock upper-A-arms, providing more clearance for stock sheet metal. All welds are TIG welded for maximum strength and appearance. Fits **HEIDTS®** and most other IFS kits. Arms arrive fully assembled, ready to install, including ball joints, bushings and cross shafts.

Description	Part#	Price
Plain Tubular A-Arms	CA-101	280.00
Polished Stainless Steel Tubular A-Arms	CA-101-SS	611.00

CA-103-SS-N-S

NARROWED UPPER & LOWER ARMS

Narrowed Upper and Lower Full A-Arms. More tire to fender clearance for deep offset wheels, as they are narrowed 5/8" per side. Must be used in sets of uppers and lowers.

Description	Part#	Price
Narrowed Plain Upper A-Arms	CA-101-N	280.00
Narrowed Polished Stainless Steel Upper A-Arms	CA-101-SS-N	611.00
Narrowed Plain Lower A-Arms With Swaybar Mounts	CA-103-N-S	475.00
Narrowed Polished Stainless Steel Lower A-Arms With Swaybar Mounts	CA-103-SS-N-S	1,252.00

HEIDTS SUPERIDE®

Product is painted for catalog purposes only! All kits ship with Silver Powder Coated Springs - not shown.

COMPLETE BASE KIT STARTING AT \$3,369.00

INCLUDED IN BASE KIT:

- HEIDTS® Crossmember
- Superide Spindles
- Tubular Upper & Lower Arms, Standard or Narrowed
- 11" Rotors with 4 Piston Wilwood Calipers
- Manual Rack & Pinion Steering
- Billet Single Adjustable Coil-Over Shocks with Silver Powder Coated Springs

Now with Silver Powder Coated Springs! Powder coating does not rust or peel while saving you money!

ALL NEW SUPERIDE-NOT A MUSTANG CONVERSION KIT!

Because this Independent Front Suspension was designed as a complete system, the individual components are not interchangeable with any other stock pieces. Every piece was designed specifically by HEIDTS® for the SUPERIDE systems. It's your assurance of the right geometry, the right fit, and of course — a super ride!

Final ride height from spindle to bottom of frame: `28-`35 Chevy = 1-1/2"
 `32 Ford = 2-1/2", `33-`34 & "A" Ford = 2"

HEIDTS® IFS IS BETTER

Independent Front Suspension gives you twice the ride of a new 4-link dropped axle at a comparable cost. It adds more cash value to your car than any other type of suspension. With HEIDTS® engineering you get an unmatched, correct, safe ride. HEIDTS® SUPERIDE complete system is perfect for the ultimate stance! Shipped by UPS, our SUPERIDE arrives complete hub to hub with no other parts to buy.

SMOOTH SAILING

"Smooth" describes the ride: very low and highly steerable with no bumpsteer and built-in anti-dive. Installing the one piece crossmember is an easy one-step operation. The upper control arms are designed to clear the fenders. The 56" hub to hub tread width gives you the narrow look without any tire to fender clearance problems.

HEIDTS® EXCLUSIVE SUPERIDE SPINDLE

This is not a Mustang dropped spindle. HEIDTS® has designed its own one piece spindle specifically for the SUPERIDE. So, now you can get the lowest ride available that's tops in looks and safety! It's clean and trim adding to the high tech appearance you want for your front end. For peace of mind we've made it out of 1045 heat treated alloy steel.

Product is painted for catalog purposes only! All kits ship with Silver Powder Coated Springs - not shown.

HEIDTS SUPERIDE® INBOARD SHOCK

BX-105-IN

Product is painted for catalog purposes only! All kits ship with Silver Powder Coated Springs - not shown.

HEIDTS® IFS IS BETTER

Our HEIDTS SUPERIDE® Open Wheel is designed for fenderless cars with pinched rails. The swept back style control arms, with the front tubes in line with the axle center are longer to meet up closer to the frame rails. The kit is designed for rails pinched to approximately 20" wide at axle center line, which is what a '32 Ford grill shell is. Ride height will be 1.25" lower than regular Superide to have that nice lowrider look so popular with fenderless cars. Control arms are available in mild steel and polished stainless steel. Shocks are available in plain or polished. Springs are chrome on all models. All kits come with Wilwood polished aluminum 4-piston calipers. Also available is our polished aluminum hub option, the finishing touch for a front suspension of this caliber. Hub to hub track width is 56" flange to flange. Both Ford and Chevy bolt patterns are available in both outboard and inboard shock configurations.

These kits are designed for the experienced home builder or shop installation, as frame modifications are required. Rails must be pinched in and c-notching of the rails for the rack boots is required. A radiator with custom lower tank will also be required.

COMPLETE BASE KIT STARTING AT \$3,812

INCLUDED IN BASE KIT:

- HEIDTS® Crossmember • Superide Spindles • Tubular Upper & Lower Arms, Standard or Narrowed
- Manual Rack & Pinion Steering • 11" Rotors with 4 Piston Wilwood Calipers • Billet Single Adjustable Coil-Over Shocks with Silver Powder Coated Springs

Now with Silver Powder Coated Springs! Powder coating does not rust or peel while saving you money!

HEIDTS® EXCLUSIVE SUPERIDE DROPPED SPINDLE

This is not a Mustang dropped spindle. HEIDTS® has designed its own one piece spindle specifically for the HEIDTS SUPERIDE®. So, now you can get the lowest ride available that's tops in looks and safety! It's clean and trim adding to the high tech appearance you want for your front end. For peace of mind we've made it out of 1045 heat treated alloy steel. Also available is our New HEIDTS® Stainless Steel Spindle for the ultimate finishing touch.

HEIDTS® IFS IS BETTER

Our HEIDTS SUPERIDE® II IFS System is the ultimate front suspension system for fat fendered Ford fans, '35-'40 Ford and '41-48 Fords. Enjoy driving your fat fendered cruiser with the smooth ride and good handling of independent suspension. Add to the value of your car with a HEIDTS® independent suspension system, the most popular suspension system in use today. Why? Because they are engineered right to work right.

ALL NEW! NOT A MUSTANG CONVERSION KIT!

Our HEIDTS SUPERIDE® II IFS System uses a Mustang II spindle to allow for a front mount rack & pinion unit, this allows for easy engine installation. The upper control arms use threaded adjusters for the wheel alignment. These threaded adjusters, unlike eccentric adjusters, will never "slip" and lose alignment no matter how big a bump you hit. "Smooth" describes the ride: very low and highly steerable with no bumpsteer and built-in anti-dive. Installing the 3-piece cross member is an easy operation. Combined with detailed instructions your installation will be as smooth as your ride with your new HEIDTS SUPERIDE® II from HEIDTS®.

HEIDTTS® STREET ROD PARTS

REAR 4-LINK KITS

Now with Silver Powder Coated Springs! Powder coating does not rust or peel while saving you money!

RB-108-SS

Shown with Coil-Overs & Panhard rod

NOTE: These kits require the use of a Panhard Rod. Coil-overs and panhard rod are available separately.

Product is painted for catalog purposes only! All kits ship with Silver Powder Coated Springs - not shown.

CLASSIC TRUCK 4-LINK KITS

Coil-over, 4-Link rear suspension provides the best ride for any classic truck. These kits attach directly to the stock frame rails. The adjustable axle brackets let you set ride height in one of three positions. A bolt-in upper crossmember for coil-overs is included. Kits available in plain steel or with polished stainless steel.

Description	Part#	Price
47-53 Chevy Pick-Up - Plain Bars	RB-108	686.00

RB-201-SS

Product is painted for catalog purposes only! All kits ship with Silver Powder Coated Springs - not shown.

STREET ROD TRIANGULATED 4-LINK KITS

Triangulated 4-Link Kits are very popular as they do not require a Panhard Rod. This design is also similar to many GM installations. Bars are fully adjustable, 1" X .156 tube with 3/4" stainless adjusters and urethane bushings, angled and straight chassis brackets, multi-position coil-over axle brackets, tabs and hardware. These kits are available in plain steel or polished stainless steel tubes.

Universal Triangulated 4-Link Kit	RB-201-U	706.00

RB-101-SS

Product is painted for catalog purposes only! All kits ship with Silver Powder Coated Springs - not shown.

STREET ROD PARALLEL 4-LINK KITS

The Parallel 4-Link Kit is very easy to install and is a good choice for many installations. It uses 1" X .156 tube bars with 3/4" stainless adjusters and urethane bushings, chassis mounting brackets, multi-position coil-over axle brackets and hardware. NOTE: These kits require the use of a Panhard Rod. Intended for fully boxed or aftermarket frames.

WHEEL FIT™ PROFESSIONAL 45 KIT

The Wheel Fit™ Professional 45 will fit most all 4- and 5- lug vehicles including bolt circles ranging from 4-100mm up to 4-130mm and 5-100mm up to 5-135mm. This kit will extend from 14" – 20" in tire bead diameter. It will also extend from 6.5" – 16" in width.

Description	Part#	Price
Wheel Fit™ Professional 45 Kit	AS-111	548.00

AS-111

BRAKE PARTS

THRU FRAME BRAKE LINE FITTINGS

Thru Frame Brake Line Fittings are available in stainless steel to complete your brake line hook-up. Short fittings are for frame thickness 1-1/8" to 2". Long Fittings are for frame thickness 1-1/2" to 2-3/8". Fittings have 1/8" NPT female thread on inside frame end and -3AN male fitting on outside. Weld-in fittings are plain steel with 1/8" NPT female threads on both ends, 2-1/4" long. Bulkhead fittings also available for single thickness frames with -3AN male fittings on both ends. Other adapter fittings available.

PROPORTIONING VALVE AND CHECK VALVES

An adjustable brake proportioning valve is used to balance front and rear brake pressures, especially in disc/drum combinations. One is also required in disc/disc applications, considering that 60% of the braking force transfers to the front wheels, and most street rods run big and little tires. 10 lb. residual pressure valve is used to maintain pressure in rear drum brake lines. 2 lb. is used in some factory caliper applications, such as 'Vette calipers.

Description	Part#	Price
Proportioning Valve	DR-020	46.00
Adjustable Proportioning Valve	DR-023	108.00
2# Residual Pressure Valve	DR-021	24.00
10# Residual Pressure Valve	DR-022	24.00

STAINLESS STEEL BRAIDED BRAKE LINE KITS

- Made of braided stainless steel (-3 hose size) many times stronger and more abrasion resistant than factory rubber hoses. Uses -3AN fitting on frame side of brake line.
- Adds to the high tech look.
- Includes caliper adapters and seal washers.

Description	Part#	Price
Stainless Steel Brake Line Kit - Mustang II Calipers (16" Long)	MP-030	38.00
Stainless Steel Brake Line Kit - GM Calipers, Metric (14" Long)	DF-020	53.00
Stainless Steel Brake Line Kit - Wilwood Calipers (14" Long)	BX-055	38.00
Stainless Steel Brake Line Kit - Wilwood Calipers (16" Long)	BX-055-1	49.00

ADJUSTABLE PROPORTIONING VALVE

Adjustable proportioning valve regulates rear brake pressure, helping to maintain correct brake bias between front and rear brakes.

Description	Part#	Price

STEERING KITS & COMPONENTS

HEIDTS® steering column hook-up kit is the perfect companion for your independent front end. In fact, it's the strongest, highest quality kit on the market.

WHY IT'S BETTER

- Automotive grade U-joints, w/needle bearing construction, the safest ones available.
- Designed for the automobile environment, they will last the life of your car.
- U-Joints double pinned at each connection for safer, stronger assembly.
- Correct two-piece shaft design allows for ample engine clearance.
- No welding or machining required-column can stay in car during installation.

ADJUSTABLE POWER STEERING VALVE

Tune your power steering with our Adjustable Power Steering Valve. It allows you to set, or "tune", the "feel" of your power steering with just the turn of a knob. The high pressure steering fluid goes thru the lower high pressure passage to the rack and back thru the upper low pressure line to the reservoir. As the knob is turned counter - clockwise, the needle valve is raised up which allows the high pressure fluid to bleed off into the return line, which reduces pressure to the rack and pinion to tighten the feel of the steering.

Description	Part#	Price
Adjustable Power Steering Valve	PS-101	97.00
Installation/fittings Kit (included in hose kits)	PS-114	71.00

Heids Superide® Rear Steer Power Rack	BS-004-PS	524.00

INDEPENDENT FRONT SUSPENSION.

Independent suspension can be very simple and very complicated at the same time. Success in making it simple is learning the rules. **And it has it's own set of rules.** Important, **Rule#1.** Unlearn everything (almost) you know about steering and suspending a car with a solid axle and 4-link suspension. That would be like trying to play football using baseball rules.

The first thing to relearn is the action of the front axle and spindle during suspension travel. There are three things to control in the front wheel: camber, caster and toe angle.

CAMBER AND CASTER

In a solid axle the camber is built into the axle and the caster built into the 4-Link design. Both are constant (they don't change during suspension travel). A solid axle moves basically straight up and down therefore, so does the spindle.

On an IFS System, the upper and lower control arms, as well as the spindle and car chassis, form an uneven parallelogram, as viewed from the front (see fig. 1 & 2). The spindle moves up and down in an arc-or radius-which is determined by the length and placement of the two control arms. Their placement also determines the amount of caster and camber change.

FIGURE 1
This is a correct Mustang II front suspension in a street rod, when the stock Mustang II suspension locations are used. Notice the parallel upper and lower arms. Also notice there is minimal camber change and almost flat radius (1) in the movement of the spindle during suspension travel.

FIGURE 2
Now we have added the stock Mustang II steering rack in the stock Mustang II location using the stock Mustang II tie rod ends. Notice the radius of the rod ends (2) matches the radius of the spindle. Also, more importantly, see that the inner tie rod pivot (3) is IN LINE with the inner pivots (4) & (5) of the upper and lower arms. This is absolutely necessary. Ford Motor Co. did their homework.

Important **Rule #2.** If any of the four pivot points are moved in any direction, for any reasons, the spindle swings in a new, unique arc which is different from the old radius. Usually at the inner pivot of the upper arm on the Mustang suspension is the one to be moved. The control arm is usually shortened and the pivot shaft lowered to clear fenders on some cars (see Fig. #3). As you can see, the spindle will now swing in a new tighter radius. That in itself is not a problem. But, Please read on, as it is about to get real interesting.

FIGURE 3
This is a typical "modified" Mustang II installation in a '32 Ford type car. The first change is to shorten and drop the upper arm pivot (4) to clear the fender. This causes the much sharper radius (1) of the spindle and resulting increased camber change. Also notice that the two arms now intersect at a theoretical point (9). But this alone is not the bad part. The next step will show you why.

TOE ANGLE

The paragraphs that follow explain why **HEIDTS®** does not make Mustang Kits for certain cars.

As we mentioned, there are three things to control in the front wheel. Camber and caster we've already covered. The third is the toe, or steering angle at which the wheel is pointed, which determines where your car goes.

You can see that this means the spindle must always remain in the direction you have pointed no matter where the spindle is in the suspension travel. This is the job of the "Tie Rod". As you can see, the exact length and location of the inner pivot of the tie rod must be very carefully selected so the outer ends of the rod, which are attached to the spindles, swing in a radius which matches the spindle radius exactly. When designing a brand new suspension system on the drawing board this determination is very easy to make, since the tie rods on the rack are actually designed to match the control arm and spindle radius. But on your conversion, this is where the problems start. So this is the next thing to unlearn.

When mounting a steering box in a solid axle installation, motor mounts, etc. usually dictate the location of the box and the pitman arm is modified to align the drag link with the tie rod. Selecting and installing a rack-and-pinion is nowhere near that simple or forgiving. **When adapting an existing suspension design, such as the Mustang design, it is very important to keep every single mounting location and pivot point, including the rack, in their original designed places.** As you have just seen, the Mustang rack, with a specific tie rod length, was designed by Ford to match the swing radius of the Mustang spindle using stock length Mustang control arms **in the locations which were selected when the Mustang was originally designed.**

If you shorten or lower the inner pivot of the upper arm, the spindle will now swing in a new, different radius which no longer matches the current tie rod radius. If you raise or lower the rack location, or change the tie rod length for any reason by using a longer tie rod end, the tie rod will swing in a new radius which does not match the current swing radius of the spindle (see Fig. #4).

FIGURE 4

...it's all over by now. The other common modification/mistake is to widen the crossmember and use a long tie rod end. Ugh, as you can see, by adding the longer (incorrect) tie rod end, the inner pivot of the tie rod (3) now has been shifted way out of line by the dimension (6). Disaster! The flatter radius of the outer tie rod end (2) no longer matches the sharper spindle steering arm radius (7). This causes the spindle steering arm to follow the incorrect radius (2) and change steering angle, or "steer" as the suspension travels up and down over "bumps": more commonly known as "Bumpsteer". You can also see that the projected line from the tie rod does not intersect the intersection point (9) of the control arms. It should. This is why the only the Mustang II system works correctly is the way Ford designed it, using all stock Mustang II parts, in the stock Mustang II locations.

EXPLAINING BUMPSTEER

The bottom line of all this radius explanation stuff is this: Since the tie rod ends attach to the spindle steering arm, the tie rod controls the steering angle of the front wheels. If your car goes over a "bump" the spindle goes up and down in its swing radius, determined by the upper and lower arms (remember?). If the tie rod swings in a different radius than the spindle during this suspension travel; it will push or pull on the steering arm of the spindle, changing the direction of the front wheel, "steering" the car. And that is how the term and the monster "BUMP-STEER" were created, where 95% of the problems with incorrect suspension design are found. It is from people not really understanding **this most important relationship between the tie rod length (not the overall rack length) and the spindle swing radius.** They feel that if they are able somehow with enough modifications to the parts, to "physically assemble all the parts" that it must be OK. Then they pull down the driveway, over that first curb and low and behold: BUMPSTEER. When you drive a car with BUMPSTEER, the car tends to wander or hop around as you drive down the road over bumps and dips. You have to constantly steer the car to keep it in the lane. Not what you would call an enjoyable ride.

BUILT-IN ANTI-DIVE

Anti dive is another characteristic required in an independent front suspension system. Anti-Dive helps prevent the car from "nose diving" under hard braking conditions, hence the name. It is something which is found in every factory car manufactured, including the Mustang and Pinto, visible in the suspension design in the upper control arm. It is mounted on an angle, with the FRONT pivot higher than the rear, not level (see fig. #5).

FIGURE 5

This is the side view of a correct Mustang IFS kit. Note the angle of the upper control arm, that is higher in front. This angle, through a lot of geometric forces in the spindle when braking, generates a lifting force on the frame at the inner A-arm mounts. This is the same angle as the Pinto, which gives the same amount of anti-dive force as the Pinto. Simply put, factory designs work the way they are supposed to in every respect, so why throw all their engineering and testing out the window?

This is the only way to incorporate this important feature, no matter what else you have heard. If you cannot see the angle in the upper arm, then the anti-dive is simply not there. Period.

The actual description of how anti-dive works involves extensive vector force diagrams and is much too lengthy to describe here. Let's just trust the big three auto manufacturers on this one, because they all use it. The Pinto uses a 3° angle for their anti-dive in the upper arm. It may look funny only because you are not used to seeing it on a street rod. Look at your family car. Do things look more normal now?

Don't bother looking for it on somebody else's street rod, especially one with other Mustang kits on it. They don't always know why the upper arms are "crooked" and fix(?) them. But how funny would your car look with the bottom of the grille ground away from bumping the street?

Now for the real point of this whole technical explanation. If you drive a Mustang or Pinto, you know that they don't bumpsteer. If you drive a car using a **HEIDTS®** Mustang conversion kit you will happily find that it doesn't bumpsteer either. Why? Because we don't give you longer tie rod ends which would MISMATCH the tie rod length and it's swing radius with the spindle radius. Because we do not alter the track width which would require longer tie rod ends. Because we don't move the location of the upper control arm pivot or shorten the upper arm (to clear fenders-that is why we limit our applications) which would change the spindle swing radius.

Because HEIDTS® duplicates the design of the Mustang suspension system as Ford Motor Company designed it, you know it will work just as smoothly and effortlessly as it does in the Mustang, which is something no one else can claim. Study the diagrams and you will see for yourself why **HEIDTS®** manufactures the finest Mustang Conversion Kit available. The only one which will truly make your car a pleasure to drive. The **ONLY ONE** that **REALLY WORKS!**

Now that you have examined this technical book, wouldn't you rather purchase one of the most important parts of your car-the front suspension and steering system-from someone who genuinely knows and is able to tell and show you how and why it is supposed to work correctly?

It is important to us that you understand why we build the kits the way we do and have become the leader in Mustang front end conversion kits.

9/16	640-970	53-81
5/8	880-1300	73-110

ENGINE SIZE

Engine size is measured by piston displacement. This is the total volume inches "swept" by all cylinders of the engine.

To determine the cubic inch displacement of an engine.

$$CID = \text{Bore} \times \text{Bore} \times \text{Stroke} \times \text{Number of Cylinders} \times 0.7854$$

STIFFNESS OF COIL SPRING

$$K = \frac{W^4 G}{8ND^3}$$

K-Spring rate (lb/in)
W-Diameter of spring wire (in.)
G-12,000,000 (for steel springs)
N-Number of "free" coils + 0.5
D- Diameter of spring coil (in.)
Note how sensitive the stiffness of the spring is to the diameter of the spring wire.

STIFFNESS OF TORSION BAR

$$K = 1,178,000 \frac{D^4}{LA^2}$$

K - Spring rate (lb/in.)
D - Diameter of bar (in.)
L - Length of bar (in.)
A - Length of lever arm (in.)

WHEEL ALIGNMENT

CASTER – the number of degrees of forward or backward tilt of the spindle at the top. Forward tilt of the spindle is negative caster. Backward tilt of the spindle at the top from true vertical is positive caster.

CAMBER – The number of degrees the top of the wheel is tilted inward or outward from true vertical. Inward tilt at the top of the wheel is negative camber. Outward tilt is positive camber.

TOE-IN – The distance in inches the leading edge of the front tires are closer than the trailing edge.

SPEED CALCULATION

Many high-performance vehicles are capable of higher speed than their speedometer can register. If the vehicle is equipped with a tachometer, its speed can be estimated with the following formula.

$$MPH = \frac{\text{Overall Tire Diameter} \times \text{Achieved Engine RPM}}{\text{Differential Ratio} \times \text{Achieved Top Gear Ratio} \times 336}$$

HANDY FORMULAS

Circumference of a circle: Multiply the diameter by 3.1416
Area of a circle: Multiply the diameter by itself and then by .7854
Volume of a cylinder: Find the area of the end then multiply by length
Area of the surface of a sphere: Multiply the diameter by itself and then by 3.1416
Volume of sphere: Multiply the diameter by itself and multiply this product by the diameter again. Then multiply this product (diameter cubed) by .5236
Area of a triangle: Multiply the base by the height and divide by 2.

CALCULATING PISTON DISPLACEMENT

The area of head of the piston in square inches, times the number of inches in the stroke, times the number of cylinders, is the engine displacement in cubic inches. The formula is $d^2 \times .7854 \times L \times N = \text{Displacement in Cubic Inches}$. N is the number of cylinders.

“PRO TOURING”

EASY TO INSTALL!

Here is how the **HEIDTS PRO-G® Subframe** installs on one of our shop cars. This bolt-in install takes little time and provides fantastic “Riding on Rails” performance. We completed the car after installing a GM “383” crate, 5sp Tremec transmission, 13” Wilwood disc brakes, NT01 Tires by NITTO and 18” x 9” Foose Rims. Look for this car at Autocross events near you as **HEIDTS®** proves you can drive it to the event - race it - then drive it home!

1. **Unbolt and roll out your old front subframe.**

2. **The new HEIDTS® Front Subframe and only four bolts, completes the installation to the body.**

3. **HEIDTS® 2” Drop Spindle and Upper and Lower Arms mount to HEIDTS® subframe.**

4. **HEIDTS® Front Subframe with Subframe Connectors joins to HEIDTS® Rear 4-Link Kit.**

BOLT A HEIDTS PRO-G® ON YOUR CAMARO/FIREBIRD OR NOVA

HEIDTS® now offers their bolt on front subframe. Featuring their new Pro-G® suspension package for unbelievable cornering and overall handling. Simply unbolt and remove your front sheetmetal, engine/trans, your old subframe, then slide in the new complete **HEIDTS®** Subframe. Reinstall your engine/trans, your sheetmetal and you are set to tear up the streets!

HEIDTS PRO-G®
2” Dropped Spindle

Part of this high performance suspension package. Make your Camaro handle like a 600 HP Go-Kart!

HEIDTS PRO-G®
Suspension

True High Performance purpose designed suspension. Not warmed-over street rod suspension, but true race car designed geometry.

Product is painted for catalog purposes only! All kits ship with Silver Powder Coated Springs - not shown.

“SMOOTH RIDE!”

INSTALLING A HEIDTS® FRONT SUSPENSION IN A ‘35-‘40 CHASSIS

Reprinted By Permission From Buckaroo Communications - Photography: Jeff Tann Words: Jeff Tann

We were talking to fellow street rodder Bob O'Bryant the other day and he told us that he just purchased a '40 coupe that he knew about since the early '60s. The car changed hands a few times, but none of the owners did anything with it. Since the '40 spent most of its time garaged, the body was straight and the chassis was in great condition. The minute the car was on the market, O'Bryant jumped at the chance to buy it.

We asked him what his plans were and he replied, “The usual.” In the old days, that would have been a dropped front axle and a hot Flathead, but today it's quite a different story. “The usual” is actually an independent front suspension with a parallel-leaf spring rear suspension and a small-block Chevy engine backed by a Turbo 350 transmission. That's the econo approach.

O'Bryant said he ordered a **HEIDTS®** front suspension because he was happy with the one under his Model A Ford. We asked him if we could photograph the installation and he was more than happy to let us do a step-by-step story. The front and rear suspension system is exactly what we have on a '40 coupe, so we told him that he would be pleased with his decision.

Ford used the same chassis from 1935 to 1940 on passenger cars and until 1941 on pickup trucks, so the installation is universal for anyone with a car that falls into that category. The install is pretty straightforward if you can follow directions, but it does require welding skill and a few special tools. You will need a MIG welder, 5-inch hand

grinder, large 1/2-inch-chuck drill motor, large hand grinder, tape measure and a variety of normal hand tools. The installation took about a day and a half to finish and it was fairly easy to accomplish.

O'Bryant knew that the suspension would be almost impossible to see under the '40, so he ordered a kit that could be painted or powdercoated. Chromeplating or polished stainless would never be seen. He also ordered the kit with GM-style front brakes because he is familiar with how well they work.

If you have been planning an independent front suspension conversion on your Ford, this story will show you how it's done. The body has been removed from the frame and it was sandblasted, making the conversion clean and easy, but if you have a running car, it could be done by removing the front clip and engine. SRB

The HEIDTS® independent front suspension came with the special crossmember, upper and lower A-arms, a power rack-and-pinion steering unit with ball joints, coilover shocks, spindles, brackets, calipers, rotors and all of the hardware needed to finish the installation. When you consider what you get, the price for this kit is very reasonable.

1) A heavy-wall-thickness square tube was tack-welded to the chassis to hold it in place when the stock crossmember is removed.

3) The crossmember was easy to remove when it was moved back to the wider part of the frame. Since these crossmembers are worth money to nostalgia rodders, owner Bob O'Bryant wanted to keep it in good condition. The radiator mounts are still attached to the crossmember and will have to be removed and used after the new front suspension is installed.

5) The HEIDTS® centerline was drawn on top of the frame to make it easy to spot.

2) Using a 3/8-inch drill, the rivets were drilled to remove the shanks.

4) According to the instructions, the centerline for the HEIDTS® suspension will be 1/2 inch back from the straight-axle centerline.

6) O'Bryant decided that it would be better to use a pair of hand clamps to secure the boxing plate before the welding was done. He started by tack-welding the section to the frame at the front and rear.

7) Here's what the framerrail looked like after it was boxed. This strengthens the frame at the point where the crossmember will be installed. Without this, the frame could tear from stress over time.

8) The crossmember was installed and it was a tight fit. A few hammer whacks were necessary to get the centerlines to match up.

9) Here's the centerline on the frame lined up with the centerline on the crossmember.

10) After all of the measurements were made and the crossmember was located correctly, it was tack-welded to the frame.

11) The upper A-arm mount or tower had to be installed next. It was placed on the frame and extends upward from the lower crossmember.

12) After the towers lined up perfectly, they were tack-welded to the frame. All of the measurements were made again to be certain they were correct. When O'Bryant was satisfied, the towers and crossmember were finish-welded to the frame.

13) The Swaybar block was bolted to the crossmember on the bottom, and when it was in place, the upper bolt hole was drilled and tapped. Doing it this way ensures that the bolt holes will line up perfectly.

14) Bolting the coilover shock to the upper tower started the installation. At this point the bolt was finger-tight just in case it would have to be removed.

15) The lower A-arm was installed using the long bolt supplied in the kit. Washers are supplied to rest against the urethane bushings.

16) The coilover shock was connected to the lower A-arm. This is a long bolt because it is also used to secure the Swaybar connector. The bolt is installed from the front and O'Bryant made sure the Swaybar connector was installed first.

17) The spindle was connected to the lower A-arm. The lower ball joint is long, so spacers are used to make sure the castle nut aligns with the cotter keyhole.

18) Using the other long bolt supplied in the kit, the upper A-arm was installed. This connection also uses the large washers supplied in the kit. The upper bolt is secured with a Nvlok locknut.

19) Now the upper A-arm can be connected to the spindle. HEIDTS® recommended using one of its narrow front suspension kits to keep the tires inside the fenderwell so the tires don't hit on turns.

23) After all the front suspension parts are installed, the bolts can be tightened. The upper A-arm bolts were secured with a pair of 15/16-inch wrenches.

25) Before the rack-and-pinion can be installed, you have to install the bolts with a pair of spacers and washers.

20) The caliper bracket is designed with one bolt on the top traveling upward into the spindle and another bolt on the bottom with a bolt that travels sideways into the spindle.

24) The lower A-arm bolt and Nylok locknut was secured with a pair of 15/16-inch wrenches.

26) The rack-and-pinion unit was reinstalled and then it was tightened with a pair of 15/16-inch wrenches.

21) The rotor was installed on the spindle and then the small spindle bearing was installed. It was also packed with high-heat disc-brake bearing grease.

22) After the rotor was installed, O'Bryant tightened the Allen bolts with a 3/8-inch Allen wrench. At this time, you should make sure that the rotors are centered between the calipers.

27) The chassis is finished and the HEIDTS® suspension looks great and works terrific. The '40 will have positive power steering, should handle like a sports car and will stop quickly with the large brakes. The best part is this kit is priced right.

QUESTIONS & ANSWERS

Q. Are independent suspension kits hard to install?

A. No, not if you purchase the correct type. All of HEIDTS® kits are designed to fit specific model cars exactly. You only need to know the type of car you have, not the frame dimensions.

Q. Do the HEIDTS® Kits work as good as a factory car?

A. Yes, because HEIDTS® does not alter the factory designs. They recognize the fact that the factory spent millions of dollars developing their designs and they are not improved by moving pivot points or changing tie rod ends or other components.

Q. How do the HEIDTS® conversion kits compare to the front subframe swaps?

A. A properly designed suspension conversion kit will ride and handle every bit as good as a subframe swap. The difference in the conversion kit is about one tenth the amount of work. When you cut off your frame rails for a subframe swap, you no longer have a place to mount the fenders or radiator. Besides all that, you have to relocate the motor mounts and often times narrow the subframe, along with the steering linkage. On quality conversion kit, be it a Mustang type or a tubular control arm type, you simply install the crossmember, which should be designed for your particular frame, bolt on the suspension components, then bolt your car back together. The difference is a job that took only a couple of days rather than two or three weeks.

Q. Do you keep your kits in stock or do I need to supply dimensions of my frame so you can build one when I order?

A. The designs of the cars for which we make conversion kits has not changed since those cars were built 40-50 years ago. So, there is no reason to special order a standard kit. All our products are built for stock and are on the shelf ready for shipment, since we already know what your frame looks like, You need only to tell us what type of car you have.

Q. How do you ship your products?

A. All our products except truck freight items, are packaged to ship U.P.S. This is the most economical method. Of course, if you are in a hurry, next day and second day service is available.

HEIDTS® ORDERING, SHIPPING & WARRANTY TERMS.

Payment: U.P.S. orders when paid by Mastercard, Visa, American Express or Discover will be shipped prepaid and the shipping costs will be included on the invoice.

Shipping: We will ship by the most economical carrier. Most orders in the Continental U.S. are shipped U.P.S.

Manufacturer's Rights Retained: HEIDTS® reserves the right to make changes in design or to make additions to or improvements upon any of its products at any time without incurring any obligation whatsoever to install the same or improve upon products previously manufactured.

Claims for Damage or Shortage: Claims for damaged or lost merchandise are to be made to freight carrier. If you receive a damaged package or a package that looks like it has been tampered with, make a written note of this to the freight carrier when you sign for receiving the package. A verbal note to the driver is not sufficient. Carefully open and be sure to save the damaged container as visible proof, this is the first thing they will ask to see! Notify the local office of the freight carrier as soon as possible (within 48 hours). Claims for shortage of merchandise (other than lost items) to be made to us within five days of receipt of order.

Return Merchandise: All sale and final merchandise may be returned only with consent of HEIDTS® Any merchandise accepted for return is subject to a 15% restocking charge. All goods approved for return must be shipped freight prepaid, as the Receiving Department is not authorized to accept collect shipments. Products that have been used or altered in any way cannot be returned. No returns after 30 days.

Guarantee and Liability: Merchandise is guaranteed free from defects in material and workmanship. For one year we will repair or replace, at our option, any product found to be defective subject to our inspection and approval. HEIDTS® will not be liable for personal or property damage caused by use or mis-use of any product we manufacture or sell. User shall determine the suitability of the product for its intended use, and the user shall assume all responsibility and risk in connection therewith.

IMPORTANT LEGAL INFORMATION

This Warranty sets forth our maximum liability for our products. We shall not be liable for special, indirect, consequential, or incidental damages. Your sole and exclusive remedy with respect to any and all losses or damages resulting from any cause whatsoever shall be as specified herein. We make no other warranty or guarantee, either express or implied, including implied warranties of merchantability and fitness for a particular purpose to the original purchaser or to any subsequent user of the product, except as expressly contained herein. In the event state law precludes exclusion or limitation of implied warranties, the duration of any such warranties shall be no longer than, and the time and manner of presenting any claim thereon shall be the same as, that provided in the express warranty stated herein. No distributor, dealer or representative of HEIDTS® has the authority to change, modify or expand this warranty. This warranty extends to the original purchaser (original purchaser means the distributor/purchaser and the initial owner of the vehicle where the product is initially installed) and is not transferable. The original purchaser of this product acknowledges that they have read this warranty, understand it and are bound by its terms and agrees to provide this warranty to the original owner of the vehicle into which the product is installed. Should state or provincial law preclude no transferability, then the warranty period is effective 30 days from the date of initial purchase. ©2014 HEIDTS®
